According to this study, the global Connected Confined Space Monitoring Solution market size will reach US\$ 936 million by 2031.

Connected Confined Space Monitoring Solution uses technologies such as mobile video, remote communication, gas detection and LBS. By deploying monitoring equipment, it collects and uploads information such as gas concentration, personnel status, video images and geographical location in confined spaces in real time, and transmits data to the monitoring platform through the network. Managers can use computer clients, handheld PAD terminals or mobile phones to remotely access devices to achieve real-time monitoring of on-site operation information, hierarchical control of personnel permissions, and camera rotation and zoom control. It also has the functions of abnormal alarm viewing, statistics and analysis. When abnormal situations occur, it automatically pushes alarm information and on-site images and other data, which is convenient for managers to grasp on-site changes in a timely manner and deal with them quickly, thereby ensuring the safety of confined space operations. A comprehensive monitoring solution.
