The global Connecting Links market size is predicted to grow from US$ 1276 million in 2025 to US$ 2052 million in 2031; it is expected to grow at a CAGR of 8.2% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

The connecting link is the core basic component in the field of mechanical transmission and lifting. Its products include standard chain links, anchor chain links, transmission chain links, etc., following international standards such as DIN 766 and ISO 1834. The specifications range from micro (?0.5mm) to heavy (?200mm), and the materials range from carbon steel, stainless steel and titanium alloy. The breaking strength can reach more than 1,500 tons, and it is widely used in marine engineering, aerospace, intelligent manufacturing and other fields. The CAGR in the past five years is 7.9%. It is mainly driven by offshore wind power, robotic automation and infrastructure demand in emerging markets. The upstream of the industrial chain relies on special materials such as high-carbon steel, titanium alloy and precision forging equipment, and the downstream is driven by policies (such as China's '14th Five-Year Plan' localization goals) and technology (5G+IoT smart monitoring). At present, domestic substitution has made progress in the mid-end market (such as the low cost of Zhejiang Sixiong Rope Industry's carbon fiber composite chain links).

United States market for Connecting Links is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Connecting Links is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
