Constant current diode (CRD) is a two-terminal junction field effect constant current device. Constant-current diodes and constant-current triodes are semiconductor constant-current devices that have come out in recent years, and are the basic electronic components that are opposite to Zener diodes. On the basis of the constant current diode, the control pin is added, and then it is developed into a constant current triode. They can output constant current over a wide voltage range and have high dynamic impedance. Because of their good constant current performance, low price, and easy use, they have been widely used in constant current sources, regulated sources, amplifiers, and protection circuits for electronic instruments.
