Constant Temperature Water Bath Shaker is a biochemical instrument that combines a temperature-controlled constant temperature water bath and an oscillator. It uses the principle of electromagnetic oscillation to generate an alternating magnetic field through an electronic circuit board, so that the stainless steel container cuts the alternating magnetic field to generate an alternating current. It has high-precision and high-stability temperature control capabilities, digital control, oxygen supplementation, timing functions, and strong versatility. It can be used for oscillation cultivation of various liquid and solid compounds such as biology, biochemistry, cells, and strains. It is widely used in petrochemical, medical, and environmental monitoring fields.
