## Abstracts

The global Construction Adhesives & Sealants Chemical market size is predicted to grow from US\$ 8706 million in 2025 to US\$ 10780 million in 2031; it is expected to grow at a CAGR of 3.6% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Adhesive is a chemical mixture, which holds at least two surfaces together to form a single unit. Sealant is a semisolid substance, which is used to fill the space between the two surfaces, thereby providing a barrier or protective coating. Adhesives have high shear and tensile strength and are used for holding and bonding applications. Sealants are preferably used for their ability to fill gaps, and resist relative movement of the substrates. They are more flexible, but have lower strength than adhesives.

The global construction adhesives & sealants chemical market is segmented based on adhesive type, sealant type, application, and geography. On the basis of adhesive type, the market is divided into water-based, solvent-based, hot melt, pressure-sensitive, and others (reactive and formaldehyde adhesives). Sealants are classified into acrylic, silicone, polyurethane, butyl, and others (polysulfide, latex, and silyl-modified polymers sealants). Applications covered in the study include residential, commercial, infrastructure, and repair structures.
