Increasingly, construction professionals have sought to harness the power of mobile devices to do their jobs more effectively. In response, more and more construction software vendors are offering companion applications (some being fully featured while others only offer a few core features) for iOS, Android and Windows smart devices.

The flexibility these apps provide allows construction professionals to be where they're needed most—at the work site instead of the office—while still being able to execute on critical tasks.

One important thing to note is that some construction apps are not standalone apps, meaning that you will have to have purchased the desktop or subscription software before you can use the app. These “paired” apps are generally free from the app store but will not work unless you have an associated account with the software vendor.

On the other hand, some construction apps are standalone, meaning you can purchase them from the app store without having to purchase or subscribe to any additional software or services. Standalone apps, while cheaper in general, might not be as fully featured as apps that are paired with traditional software.

The global Construction Apps market size is projected to grow from US\$ 1369.6 million in 2023 to US\$ 2313.9 million in 2030; it is expected to grow at a CAGR of 7.8% from 2024 to 2030.
