The global Construction Drawing Services market size is predicted to grow from US\$ 7417 million in 2025 to US\$ 10670 million in 2032; it is expected to grow at a CAGR of 5.4% from 2026 to 2032.

Construction Drawing Services refers to the process by which professional design teams or organizations utilize technologies such as Computer-Aided Design (CAD) and Building Information Modeling (BIM) to produce accurate, standardized, and construction-oriented engineering drawings based on architectural, structural, and electromechanical design plans, specifications, and client needs. These services provide comprehensive technical services, from drawing design and optimization to review and proofreading. Their core goal is to transform abstract design concepts into concrete, actionable construction guidelines, clarifying the technical parameters, structural details, material specifications, and installation requirements for each project step. These services provide core technical support for construction implementation, cost accounting, quality control, and final acceptance, serving as a critical bridge from the design phase to the construction phase.

BIM technology has become a mainstream tool in the architectural drafting industry. By 2024, over 60% of architectural design firms will have fully adopted BIM technology for architectural drafting, a 5 percentage point increase from 2023. It is projected that by 2025, BIM drafting services will account for over 35% of the total construction drafting services industry, and the application coverage of BIM technology will increase to 55.2%.

The penetration rate of AI-assisted drafting functions will increase from 12.9% in 2023 to 18.5% in 2024, indicating that artificial intelligence is gradually being integrated into

engineering drafting processes, improving both efficiency and accuracy. Furthermore, emerging technologies such as 3D visualization modeling are beginning to be applied in some large-scale architectural design projects and are expected to be gradually adopted within the industry over the next few years.
