Construction Equipment Brake System is a braking assembly used in excavators, loaders, graders, cranes, and other heavy-duty construction machinery. It provides controlled stopping, parking safety, and operational stability under high load, uneven terrain, and harsh working conditions.

The industrial chain includes upstream castings, friction materials, discs, drums, hydraulic parts, seals, springs, and control components. Midstream covers machining, assembly, calibration, and performance testing. Downstream applications mainly include excavators, loaders, cranes, road machinery, mining support equipment, and aftermarket service channels.

The expansion of infrastructure and engineering machinery renewal demand drives the technical upgrading of construction equipment brake systems. High safety, strong load-

bearing capacity and adaptive braking response are key performance indicators under complex construction working conditions. Intelligent sensing and hydraulic control optimization further enhance operational reliability.
