Some of the future market trends of construction ERP software are:

Consumer Expect Localized Content: More consumers expect websites to (literally) speak their language. To expand market share and open new revenue opportunities, brands must create content with a global appeal. We can expect an increase in translation demand for websites, games, apps, and more.

Emerging Markets and Shifting Dynamics: The Regional Comprehensive Economic Partnership (RCEP) agreement signed in November 2020 has created the world's largest free-trade zone among 15 countries in the Asia-Pacific region, with a total population of 2.2 billion. China, Japan, and South Korea reap the most benefits from reduced customs duties, which threatens the competitiveness of foreign companies. To stay relevant, U.S. and European brands must increase their presence in these markets, e.g., by offering content and services in South-East Asian languages such as Vietnamese, Thai, and Indonesian.

Symbiotic Relationship Between Human and Machine Translation: More translation services will combine neural machine translation (NMT) engines with human translators to speed up the process while ensuring that the final content incorporates the appropriate expressions and cultural references that speak to the local market.

Localization as a Competitive Advantage: As more apps enter the global market, localization becomes a key factor in differentiating from competitors and gaining user loyalty. App developers will need to invest in quality localization that reflects their brand identity and values across different cultures.

Localization as a User Experience (UX) Strategy: Localization is not only about translating words but also about creating a seamless and engaging user experience that meets the expectations and preferences of each target market. App developers will need to consider various aspects of UX design such as layout, navigation, icons, images, colors, fonts, etc., when localizing their apps.
