The global Construction Grade Hydroxypropyl Methyl Cellulose market size is predicted to grow from US\$ 749 million in 2025 to US\$ 927 million in 2032; it is expected to grow at a CAGR of 3.2% from 2026 to 2032.

Construction grade hydroxypropyl methylcellulose (HPMC) is a multifunctional nonionic cellulose ether specially used in building materials to improve their performance. As an efficient thickener, water retainer and film former, HPMC can significantly improve the workability, adhesion and durability of a variety of building materials such as mortar, tile adhesive, putty powder, self-leveling floor, etc., while also enhancing the anti-sagging and waterproof properties of the materials. By adjusting its viscosity grade and degree of substitution, HPMC can meet the needs under different construction conditions, provide stable and reliable support for construction projects, and is an indispensable functional additive in the modern construction industry.

The development trend of architectural grade hydroxypropyl methylcellulose (HPMC) is moving towards higher performance, multifunctionality and environmental protection. In the future, HPMC will not only enhance its traditional thickening, water retention and film-forming properties, but also achieve better weather resistance, bonding strength and construction performance through technological innovation to adapt to the complex and changing building environment requirements. At the same time, with the popularization of the concept of green building, the development of environmentally friendly HPMC with renewable raw material sources, reduced production energy consumption and reduced carbon footprint will become a research focus. In addition, customized solutions and products optimized for specific applications will also become a new trend in market development, meeting the refined needs of different fields from high-performance concrete to energy-saving insulation systems. These advances will further

consolidate the key position of HPMC in modern building materials and promote the sustainable development of the entire industry.
