A Construction and Demolition (C&D) Waste Sorting System is an advanced processing facility designed to efficiently separate and recycle materials generated from construction and demolition activities. These systems utilize a combination of mechanical and manual sorting techniques to categorize debris such as concrete, wood, metals, plastics, and gypsum. By using equipment like conveyors, screens, crushers, and magnetic separators, these systems enhance the recovery of recyclable materials, reduce the volume of waste sent to landfills, and ensure compliance with environmental regulations. The primary goal is to promote sustainable waste management practices, reduce environmental impact, and recover valuable resources for reuse in new construction projects.
