The global Construction Waste Crusher market size is predicted to grow from US\$ 2301 million in 2025 to US\$ 3163 million in 2032; it is expected to grow at a CAGR of 5.1% from 2026 to 2032.

A Construction Waste Crusher is a type of crushing equipment used to process construction and demolition waste, such as concrete, bricks, asphalt, tiles, stones, and mixed building debris. It reduces large waste materials into smaller aggregates that can be reused in road construction, backfilling, recycled concrete production, landscaping, and other infrastructure applications. Depending on mobility and capacity, construction waste crushers can be designed as stationary, semi-mobile, or mobile crushing systems, often equipped with jaw crushers, impact crushers, cone crushers, screens, conveyors, and magnetic separators. In 2025, global Construction Waste Crusher production reached approximately 2614 units, with an average global market price of around 900 k USD/unit. The production capacity for Construction Waste Crusher in 2025 was approximately 3000 units. The typical gross profit margin for Construction Waste Crusher between 20% and 40%.

The Construction Waste Crusher market is driven by increasing urban renovation, demolition activities, infrastructure construction, and the rising demand for recycling construction and demolition waste. Governments in many regions are promoting circular economy policies, landfill reduction, and the reuse of recycled aggregates, which supports the adoption of construction waste crushing equipment. Mobile crushers are gaining popularity because they can be deployed directly at demolition sites, reducing transportation costs and improving material recovery efficiency. However, the market may be affected by high equipment investment, uneven recycled aggregate standards, and fluctuations in construction activity.
