The global Construction Waste Crushing Equipment market size is predicted to grow from US\$ 2301 million in 2025 to US\$ 3163 million in 2032; it is expected to grow at a CAGR of 5.1% from 2026 to 2032.

Construction Waste Crushing Equipment refers to machinery used to crush, screen, and process construction and demolition waste, such as concrete, bricks, asphalt, stones, tiles, and reinforced concrete, into reusable aggregates or recycled materials. These machines usually include jaw crushers, impact crushers, cone crushers, mobile crushing plants, screening equipment, conveyors, and magnetic separation units. They are widely used in demolition sites, recycling plants, road construction, urban redevelopment, and infrastructure projects to reduce landfill disposal, lower raw material consumption, and support circular economy development. In 2025, global Construction Waste Crushing Equipment production reached approximately 2614 units, with an average global market price of around 900 k USD/unit. The production capacity for Construction Waste Crushing Equipment in 2025 was approximately 3000 units. The typical gross profit margin for Construction Waste Crushing Equipment between 20% and 40%.

The Construction Waste Crushing Equipment market is driven by the growing amount of construction and demolition waste, stricter environmental regulations, rising demand for recycled aggregates, and increasing investment in urban renewal and infrastructure construction. Mobile and modular crushing equipment is becoming more popular because it can be deployed directly at demolition sites, reducing transportation costs and improving processing efficiency. In the future, the market is expected to develop toward higher automation, better dust and noise control, lower energy consumption, and integrated crushing-screening-sorting systems, especially in regions with strong waste

recycling policies and limited landfill capacity.
