The global Construction Waste Shredder market size is predicted to grow from US\$ 2301 million in 2025 to US\$ 3163 million in 2032; it is expected to grow at a CAGR of 5.1% from 2026 to 2032.

A Construction Waste Shredder is an industrial machine used to reduce the size of construction and demolition waste, such as concrete debris, wood, plastics, insulation materials, gypsum board, bricks, asphalt, mixed building waste and light metal scraps. It is usually used as a front-end size-reduction machine in C&D waste recycling lines, helping bulky and irregular waste become more uniform for screening, sorting, metal separation, transportation, landfill volume reduction, RDF production or recycled aggregate processing. In 2025, global Construction Waste Shredder production reached approximately 2614 units, with an average global market price of around 900 k USD/unit. The production capacity for Construction Waste Shredder in 2025 was approximately 3000 units. The typical gross profit margin for Construction Waste Shredder between 20% and 40%.

The Construction Waste Shredder market is driven by the growth of construction and demolition waste recycling, stricter landfill regulations, rising demand for recycled aggregates, and the broader shift toward circular construction. Shredders are increasingly used by waste recycling plants, demolition contractors, municipal solid waste operators and building material recyclers to improve material recovery and reduce disposal costs. Market demand is also supported by mobile and modular recycling systems, automated sorting lines, and investment in C&D waste processing capacity, especially in regions with strong infrastructure renewal and environmental regulation.
