The global Consumer Battery Pack market size is predicted to grow from US$ 16460 million in 2025 to US$ 30190 million in 2032; it is expected to grow at a CAGR of 9.2% from 2026 to 2032.

In 2024, global production of Consumer Battery Pack reached 2.819 billion units, with an average selling price of US$5.48 per unit. The gross profit margin was 17.65%, and the production capacity was approximately 100,000-150,000 units per day. 3C consumer batteries are primarily used for mobile phones, digital devices, tablets, and laptops. They include power banks, power tools, smart travel batteries, smart hardware batteries (such as TWS earbuds, robot vacuums, smartwatches, and drones), and precision structural components (such as mobile phone and tablet exterior components, precision molds, IoT products, and products with advanced technology). Consumer Battery Pack are used for 3C products such as power banks, mobile phones, and tablets. These products do not require power batteries and are mostly equipped with soft-pack polymer batteries.

According to IDC data, global smartphone shipments are expected to reach 1.24 billion units in 2024, a 6.4% year-over-year increase, marking six consecutive quarters of growth. China's smartphone market is expected to ship approximately 286 million units, a 5.6% year-over-year increase. Technological innovations such as generative artificial intelligence (AI), screen sizes, and battery life are driving significant consumer demand for device upgrades. The global mobile phone market is expected to continue growing in 2025, with the Chinese market expected to maintain its growth trend due to a replacement cycle driven by technological advancements. Smartphones are currently the most suitable platform for on-device AI, and the efficiency improvements brought by AI technology have been proven. In 2025, the technological evolution of AI-powered

phones will continue to drive both short- and long-term device upgrades. Smartphone shipments are forecast to reach 1.26 billion units in 2025, a 2.3% increase from 2024. Of this total, AI-powered phones are expected to reach 234 million units, a 363.6% year-over-year increase. In China, smartphone shipments are forecast to reach 289 million units in 2025, a year-on-year increase of 1.04%. Of this total, shipments of new-generation AI-powered phones are expected to reach 118 million units, accounting for approximately 40.8% of China's smartphone shipments and a year-on-year increase of 59.8%. Global personal computer (PC) shipments are expected to reach approximately 253 million units in 2024, a year-on-year increase of 2.6%. As of the fourth quarter of 2024, the PC market has achieved five consecutive quarters of growth, showing signs of a positive market recovery. According to a Canalys survey, laptop system upgrades are likely to drive an increase in the rate of laptop device updates in the coming quarters. Furthermore, innovations in large-scale model technology are creating disruptive opportunities for the PC market. While AIPCs (artificial intelligence personal computers) improve user productivity and user experience, they also place new demands on laptop hardware, requiring upgrades in battery, battery life, and heat dissipation. Furthermore, the productivity and privacy benefits of locally deployed AI assistants will effectively drive demand for device upgrades in the PC market. A TechInsights research report indicates that the continued global economic recovery, growing demand for digital education, the prevalence of remote work and learning, and the development of the gaming industry have created new growth drivers for the laptop market. According to IDC's forecast, the AIoT (Artificial Intelligence Internet of Things) industry, the metaverse concept, and the continued development of consumer health awareness are driving new growth for the smart wearables market. By 2024, AI-enabled products will proliferate, with new categories such as smart glasses, AI-powered headphones, and AI-powered wristbands becoming new growth drivers for wearables. AI-driven device power consumption increases will directly drive battery energy density upgrades. From a product perspective, major global consumer electronics manufacturers are actively deploying cloud, edge computing, and end-device technologies. In 2025, AI wearables will not only maintain their rapid growth trend but will also redefine human-computer interaction through technological innovation and scenario integration, becoming a key vehicle for the implementation of AI in the consumer market and driving demand for lithium batteries.
