The global Consumer Electronics Battery Product Certification market size is predicted to grow from US\$ 388 million in 2025 to US\$ 735 million in 2032; it is expected to grow at a CAGR of 10.1% from 2026 to 2032.

Consumer electronics battery product certification is a conformity assessment conducted by governments or authoritative institutions to ensure consumer safety and regulate market order. This assessment, based on mandatory or voluntary standards, covers core indicators such as safety, performance, and environmental protection, ensuring that products meet regulatory requirements before being sold on the market. Specifically, for China's market access requirements, this mainly refers to battery 3C certification, etc. This is a product conformity assessment system implemented by the Chinese government to protect consumer safety and national security, and to strengthen product quality management, in accordance with laws and regulations. This certification system requires battery products sold in the Chinese market to comply with relevant national standards and technical specifications, and to pass the testing and auditing of designated certification bodies. The industry's gross profit margin can reach 15%-35%.

Market drivers primarily include the following:

Mandatory Policy and Standard Upgrades

Mandatory requirements such as China's CCC certification and the EU's CE certification force companies to improve product safety and compliance. Simultaneously, the improvement of international standards (such as IEC 62133) accelerates technological

standardization, forming a competitive barrier of 'core patents + large-scale production.'

Expanding Application Scenarios and Upgrading Demands

Demands for longer battery life in smartphones, thinner and lighter wearable devices, and high-power output in drones are driving battery iterations towards higher energy density and longer lifespan. For example, foldable screen phone batteries need to meet the requirements of smaller size and higher capacity.

Technological Iteration and Ecosystem Improvement

Innovative technologies such as solid-state batteries and silicon-based anodes reduce reliance on scarce resources and improve cost competitiveness. The widespread adoption of the AIoT ecosystem (such as smart homes and smart mobility) is creating demand for customized batteries, driving the industry towards 'technological iteration + ecosystem collaboration.'
