Consumer electronic functional products refer to devices that realize specific functions of consumer electronic products such as laptops, smart phones, wearable devices, audio-visual equipment and their components. They rely on innovative materials and processes to realize various functions in a small space that traditional mechanical parts cannot cope with. They mainly realize functions such as pasting, fixing, buffering, shielding, dustproofing, insulation, heat dissipation, reinforcement, protection, identification, publicity, and guidance. Consumer electronic functional products are mainly processed through striping, laminating, die-cutting, packaging and other processes. They are customized products with the characteristics of diverse varieties, complex models, lightness, and precision. Consumer electronic functional products are important components that are essential for downstream smart terminal products. They are the basis for ensuring that electronic components can operate normally in a suitable working environment. The quality of them directly determines the quality, performance, service life and reliability of downstream smart terminal products.
