## Abstracts

The global Consumer MOSFET market size is predicted to grow from US$ 5787 million in 2025 to US$ 8169 million in 2032; it is expected to grow at a CAGR of 5.1% from 2026 to 2032.

A MOSFET (Metal-Oxide-Semiconductor Field-Effect Transistor) is a semiconductor device that controls current through the electric field effect. Its core function is to implement switching control or signal amplification in circuits. Consumer MOSFETs are a subcategory of MOSFETs, specifically designed for the consumer electronics sector to meet the power, cost, and reliability requirements of consumer products. Their technical parameters (such as voltage, current, and power consumption) and packaging are optimized for consumer electronics applications, distinguishing them from industrial-grade and automotive-grade MOSFETs, which require higher temperature resistance and interference immunity. In 2024, global Consumer MOSFET production reached approximately 12515 million units, with an average global market price of around US$ 0.45 per unit. The upstream supply chain for consumer MOSFETs primarily includes raw material suppliers and production equipment providers. Raw materials include silicon wafers, photoresists, and specialty gases, while equipment includes photolithography machines and etching machines. The quality and availability of these upstream products directly impact the performance and production costs of consumer MOSFETs. The midstream involves MOSFET design, manufacturing, packaging, and testing, and companies include IDMs, fabless design firms, and foundries. Downstream, various application companies in the consumer electronics sector, such as Apple, Samsung, and Xiaomi, utilize consumer MOSFETs in products like smartphones, tablets, and home appliances. Changing consumer electronics market demand and product innovations directly impact market demand and technological development for consumer MOSFETs.
