The global Consumer Switch Mode Power Supplies market size is predicted to grow from US$ 12700 million in 2025 to US$ 18760 million in 2032; it is expected to grow at a CAGR of 5.8% from 2026 to 2032.

Consumer switch mode power supplies (SMPS) are a type of power product that utilizes high-frequency switching technology to convert and regulate voltage efficiently, widely applied in smartphones, laptops, tablets, smart home devices, routers, and small household appliances. Compared with traditional linear power supplies, SMPS are smaller in size, more energy-efficient, and offer superior thermal performance, while supporting multiple input voltages and output power levels. Overall gross margins typically range from 15% to 25%, depending on power rating, fast-charging protocols, size, and integration of high-frequency components. Global production capacity is heavily concentrated in China, Taiwan, and Southeast Asia, with annual output reaching 4 billion units, sufficient to meet the ongoing demand from the global consumer electronics market.

Upstream, the core raw materials of SMPS include power semiconductor devices (MOSFETs, IGBTs, GaN/SiC devices), power ICs, transformers, inductors, capacitors, and thermal management materials, with semiconductor devices, magnetic components, and high-frequency PCBs representing key cost and technological barriers. Leading upstream suppliers include Infineon, onsemi, STMicroelectronics, Maxim Integrated, Murata, TDK, and Panasonic. Downstream customers comprise global smartphone, laptop, tablet, and smart home brands such as Apple, Samsung, Huawei, Xiaomi, OPPO, Lenovo, Dell, as well as numerous smart home and wearable device manufacturers, all of which continuously demand improvements in efficiency, fast-charging capability, and safety performance of power supplies.
