The global Contact Image Sensor market size is predicted to grow from US\$ 1533 million in 2025 to US\$ 2308 million in 2031; it is expected to grow at a CAGR of 7.1% from 2025 to 2031.

Contact image sensor is a kind of integrated module. It is a combination of an optical, a light sensing and an illumination system; all within one compact system. It is a type of LED sensor having useful applications in scanner technologies. Contact image sensor has become popular as it is a small and economic power source of imaging capability. Contact image sensor can sense any light which incident over its silicon surface. The distance between the document being scanned and the sensor is very less in the contact image sensor. Unlike CCD technology (charged coupled device), the size of every cell of the silicon surface is equal to the scale of the information to be scanned or captured. The image enlargement and reduction is not required when contact image sensor scans the image. Manufacturers are trying to innovate optical technologies with the help of contact image sensor. Brightness, uniformity, depth of illumination and optical simulation technology are some of the unique features of the contact image sensing technology.

A CIS typically consists of a linear array of detectors, covered by focusing lenses and flanked by red, green, and blue LEDs for illumination. The use of LEDs allows the CIS to be highly power efficient, allowing scanners to be powered through the minimal line voltage supplied via a USB connection. CIS devices typically produce lower image quality compared to CCD devices; in particular, the depth of field is greatly limited, which poses a problem for material that is not perfectly flat. However, a CIS contact

sensor is smaller and lighter than a CCD line sensor, and allows all the necessary optical elements to be included in a compact module, thus helping to simplify the inner structure of the scanner. With a CIS contact sensor, the scanner can be portable, with a height of only around 30 mm. CIS is both a key component of, and widely used in, scanners (especially portable scanners), electrographs, bar code readers and optical identification technology.

The industry's Top 5 manufacturers, Mitsubishi Electric, Canon, ROHM Semiconductor, ON Semiconductor and Syscan, accounted for 80.73% of

global revenue share in 2019.
