The global Contact Lens Optical Inspection Equipment market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The production of contact lenses involves numerous manufacturing steps. For instance, after injection moulding of plastics, checking for the presence of the casting mould and the lens, as well as detecting overmoulding. Another task is checking that the lens is present in the blister pack and detecting whether there are any drops of water or other foreign particles on the edges of the seal of the blister pack. During a subsequent step, blister packs with foils are checked. In the process, the foil position as well as the correctness and quality of the labelling is checked. Furthermore, the 2D data matrix code must be checked with respect to legibility.
