The report requires updating with new data and is sent in 48 hours after order is placed.

Contact lithography machine is a device that uses photolithography technology to transfer the pattern on the mask plate to the photosensitive material through contact exposure. In the contact lithography process, the pattern on the mask (also called a 'mask' or 'photoresist') is in direct contact with a wafer coated with photoresist, and then exposed by a light source.

Contact lithography technology is characterized by high precision and high resolution. Since the mask is in direct contact with the wafer, the diffraction of light can be reduced, thereby achieving exposure of smaller feature sizes. However, this technology also has some disadvantages, such as easy to cause scratches, contamination particles and other problems, which may affect the performance and life of the device.

In summary, the contact lithography machine is a high-precision, high-resolution lithography equipment that transfers the pattern on the mask to the photosensitive material through contact exposure. It is one of the important tools in the semiconductor chip manufacturing process.

The global Contact Lithography Machine market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.

Contact lithography machines are mainly used in the production process of semiconductor chips and flat panel displays. Semiconductor chips are widely used in electronic products, communication equipment, medical equipment and other fields, while flat panel displays are widely used in consumer electronic products such as televisions, computers, and mobile phones. The strong market demand in these two fields has driven the rapid growth of the lithography machine market. Especially in the Chinese mainland market, with the rapid development of the semiconductor industry and the improvement of independent research and development capabilities, the demand for lithography machines is also increasing.

At present, the lithography machine market shows a trend of parallel development at home and abroad. Foreign advanced technology and equipment have occupied a dominant position in the market to a certain extent, and have certain technical advantages and competitiveness. However, with the rapid development of the domestic semiconductor industry and the improvement of independent research and development capabilities, the domestic lithography machine market is also gradually rising.

In summary, while the contact lithography machine market maintains rapid growth, it

also faces some challenges and opportunities.
