The global Contact and Contactless CPU Card Chip market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Contact and contactless CPU card chips are integrated circuit chips used to store and process data. The contact CPU card chip transmits data through physical contact with the card reader, which has the characteristics of high-speed transmission and high reliability. The contactless CPU card chip uses wireless near field communication technology for data transmission without physical contact with the card reader. It has the advantages of easy use, hygiene and safety, and long service life.

Contact and contactless CPU card chips are widely used in bank cards, mobile phones, transportation cards, social security cards, access cards and other fields.
