The global Contactless Blood Leak Detector market size is predicted to grow from US\$ 57.49 million in 2025 to US\$ 79.73 million in 2032; it is expected to grow at a CAGR of 4.9% from 2026 to 2032.

The working principle of contactless blood leak detectors is usually based on optical, electromagnetic or other non-contact sensing technologies. These technologies can sense and detect the presence of blood without physical contact with the blood. Specifically, the sensor emits a specific type of signal (such as light waves, electromagnetic waves, etc.). When these signals encounter blood, specific reflection, absorption or scattering effects occur. The sensor detects blood leaks by capturing changes in these effects.
