## Abstracts

The global Contactless Delivery Robot market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Contactless Delivery Robots (CDRs) are autonomous operating robots capable of safely delivering parcels, food, or other goods to user-specified locations without direct contact with delivery personnel. Its core upstream components include radar sensors, cameras, computing chips, lithium batteries, software arithmetic platforms, and motors and drive systems. With its autonomy and contactless delivery, non-contact delivery robots have been widely used in industries such as healthcare, food, logistics, and e-commerce. The market is currently highly competitive, with key players including e-commerce giants, logistics companies, and numerous startups. Downstream customers cover e-commerce platforms, logistics companies, online takeaway platforms, hotels and offline retail supermarkets. With the development of technology, the market price of contactless delivery robots has dropped significantly, from US\$70,000 per unit in 2020 to US\$15,000 in 2023. From a cost perspective, contactless delivery robots are approaching the cost of current human delivery. The rapid development of 5G smart infrastructure and the boom in online platforms for the e-commerce and F&B industries are further driving the adoption of this technology across multiple verticals. The global contactless delivery robots market size is expected to reach USD 530 million by 2030.
