The global Contactless Expanded Beam Fiber Optic Connector market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Contactless expanded beam connections are contactless, meaning that the light signal traverses a small gap between two connector endfaces. Expanded beam connectors accomplish this using use lenses to expand and collimate light signals, which essentially expands the signal from smaller fiber core size into a much larger diameter and sends the light signals in parallel to each other. The expanded beam can be as much as 150 times larger than the original fiber core. A second lens then refocuses the light into the connecting fiber, essentially bringing the light signal back down to the smaller core diameter.
