## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

A Contactless Meal Pick-Up Locker System is an innovative solution designed to facilitate secure and efficient food and meal distribution, particularly in settings like restaurants, cafes, or food service establishments. This system typically comprises a series of lockers equipped with electronic controls and touchless interfaces. Customers who place orders online or via mobile apps can use the contactless system to retrieve their pre-ordered meals without direct physical contact with restaurant staff. Once the ordered meal is ready, it is placed in a designated locker, and the customer receives a notification, often through a mobile app or a unique code, enabling them to unlock the assigned compartment and collect their order. This technology provides a seamless, convenient, and hygienic experience for both customers and food service providers, reducing wait times and minimizing interpersonal contact, which has become particularly relevant in the context of health and safety considerations, such as those heightened by the COVID-19 pandemic.

The global Contactless Meal Pick Up Locker System market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
