The global Contactless Voltage Stabilizer market size is predicted to grow from US\$ 885 million in 2025 to US\$ 1287 million in 2032; it is expected to grow at a CAGR of 5.6% from 2026 to 2032.

Contactless Voltage Stabilizer is a new generation of fast voltage stabilization equipment. It adopts high-speed computing and metering single-chip microcomputer control technology, fast AC sampling technology, effective value correction technology, current zero-crossing switching technology and fast compensation voltage stabilization technology. It controls several thyristor voltages to cross zero and switch in a specific order to change the size and polarity of the compensation voltage, thereby realizing the voltage stabilization function. The contactless voltage stabilizer is mainly composed of an isolation transformer, an SCR module, a CPU control core, a fast voltage stabilization technology and a safety protection device. It realizes full contactless control, safe and efficient, high-precision, high-speed response, complete functions, strong overload capacity, no distortion, and low loss. It is widely used in industry, transportation, national defense, communications and other fields. It is particularly suitable for electrical equipment that requires highly reliable and highly stable power supply and harsh power consumption environments with large power grid fluctuations and instantaneous voltage changes. It is one of the important equipment to ensure the stable operation of electrical equipment.
