The global Container Rubber Tired Gantry Crane market size is predicted to grow from US\$ 853 million in 2025 to US\$ 917 million in 2032; it is expected to grow at a CAGR of 1.1% from 2026 to 2032.

A container rubber-tired gantry crane (RTG crane) is a type of mobile gantry crane used for handling containers at ports and intermodal terminals. Unlike traditional gantry cranes, RTG cranes are mounted on rubber tires, allowing them to travel along container stacking rows and lift containers from trucks or stack them in the yard. These cranes are commonly employed for efficient container handling in port facilities.

The market for container rubber-tired gantry cranes (RTG cranes) is closely tied to the global shipping and logistics industry. It is influenced by factors such as international trade volumes, the expansion and modernization of port facilities, and advancements in crane technology. As global trade continues to grow, there is an increasing demand for efficient container handling equipment, and RTG cranes play a crucial role in meeting this demand. Manufacturers in the market may focus on developing cranes with enhanced automation and energy efficiency features to address the evolving needs of port operators.
