According to our LPI (LP Information) latest study, the global Continuous Aerosol Valve market size was valued at US\$ 1165.6 million in 2023. With growing demand in downstream market, the Continuous Aerosol Valve is forecast to a readjusted size of US\$ 1766.7 million by 2030 with a CAGR of 6.1% during review period.

The research report highlights the growth potential of the global Continuous Aerosol Valve market. Continuous Aerosol Valve are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Continuous Aerosol Valve. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Continuous Aerosol Valve market.

Modern aerosol spray products have three significant parts: the can, the actuator, and the valve. The valve is crimped to the rim of the can, and the design of this component determines the spray rate. The actuator is pressed down by the user to open the valve. The shape and size of the nozzle in the actuator is used to control the spread of the aerosol spray.

In a continuous aerosol, the valve is equipped with a fast filling housing in which gas orifice (VPH) and product orifice (RTP) can be of various dimensions. The dip tube is mounted outside the housing tang, and the valve should be used in upright position.
