The global Continuous Battery Slurry Mixing Equipment market size is predicted to grow from US\$ 509 million in 2025 to US\$ 848 million in 2032; it is expected to grow at a CAGR of 7.6% from 2026 to 2032.

Continuous Battery Slurry Mixing Equipment is industrial equipment used in lithium-ion battery electrode manufacturing to continuously mix, disperse, and homogenize active materials, conductive agents, binders, and solvents into stable slurry. The system enables continuous feeding, mixing, vacuum deaeration, and discharge to ensure consistent slurry viscosity, particle dispersion, and coating performance. It typically includes feeding units, high-shear or planetary mixing modules, vacuum degassing systems, temperature control units, inline viscosity monitoring, and automated control systems. It is widely used in power batteries, energy storage batteries, and consumer batteries, where slurry quality directly determines electrode coating uniformity and battery performance. The industrial chain of Continuous Battery Slurry Mixing Equipment includes upstream components such as high-shear mixers, planetary mixing units, vacuum pumps, feeding systems, temperature control systems, viscosity sensors, PLC/CNC controllers, pipelines, dispersion blades, automation modules, and industrial software. The midstream covers equipment design, mixing process development, continuous feeding system integration, dispersion optimization, vacuum deaeration design, automation integration, assembly, testing, and commissioning. Downstream users mainly include lithium-ion battery manufacturers, electrode producers, power battery companies, energy storage battery firms, and consumer battery manufacturers. Supporting services include slurry formulation optimization, equipment maintenance, calibration, software upgrades, spare parts supply, and operator training. In 2025, global Continuous Battery Slurry Mixing Equipment production reached approximately 1,368 units, with an average global market price of around US\$380,000 per unit. The gross

profit margin of major companies in the industry is between 25%-45%. In 2025, the global production capacity of Continuous Battery Slurry Mixing Equipment was approximately 1,824 units.

The Continuous Battery Slurry Mixing Equipment market is expanding steadily driven by the rapid scaling of lithium-ion battery production for electric vehicles, energy storage systems, and consumer electronics. As battery manufacturers move toward gigafactory-scale production, continuous slurry mixing is increasingly preferred over traditional batch mixing due to its advantages in process stability, higher consistency, reduced labor dependency, and improved coating quality. The demand is particularly strong for high-energy-density batteries and large-scale production lines where uniform slurry dispersion directly affects electrode performance and battery safety. Technology trends include higher automation levels, inline viscosity monitoring, vacuum-assisted degassing, closed-loop process control, and full integration with coating and calendaring systems. However, challenges remain in process stabilization, equipment scaling, material compatibility, and maintenance of continuous operation. Suppliers with strong process engineering capabilities, automation integration, and slurry formulation expertise are more competitive in this evolving market.
