A continuous blanching machine is a type of food processing equipment designed to blanch large quantities of vegetables, fruits, or other food products in a continuous, automated process. Blanching is a cooking method where food is briefly immersed in boiling water or exposed to steam and then quickly cooled, typically in ice water or by blowing cold air. This process is used to prepare the food for further processing, such as freezing, canning, or drying, and it helps to retain color, texture, and nutritional value. Continuous blanching machines are used in large-scale food processing operations where high volumes of product need to be blanched efficiently and consistently. They are common in the frozen food industry, canning factories, and other commercial food processing facilities. The continuous process allows for a high production rate with minimal labor, ensuring that the blanched products maintain their quality and are ready for the next stage of processing.

The global Continuous Blanching Machine market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
