The global Continuous Casting Copper Mould market size is predicted to grow from US\$ 860 million in 2025 to US\$ 1201 million in 2032; it is expected to grow at a CAGR of 5.0% from 2026 to 2032.

A continuous casting copper mould is a critical component in the continuous casting process, used primarily in the production of metals like steel, copper, and aluminum. The mould is typically made from high-conductivity copper and lined with specialized coatings to enhance durability and reduce wear. Its primary function is to solidify molten metal into a specific shape, such as billets, blooms, or slabs, as the metal flows through it. The mould's design ensures uniform cooling and solidification, which is essential for producing high-quality, defect-free cast products. Continuous casting copper moulds are widely used in industries like metallurgy, construction, and manufacturing due to their efficiency and ability to improve production rates and product consistency.

Continuous casting copper mould play a crucial role in the continuous casting of steel, particularly in industries like the Continuous Casting Machine (CCM) market, where they are used to shape molten metal into solid billets, slabs, or blooms. The demand for copper mould tubes in the CCM market is likely to continue growing due to their key attributes, such as excellent thermal conductivity, durability, and resistance to wear and corrosion. These properties help maintain high-quality casting, reduce maintenance downtime, and increase operational efficiency.

As the steel industry continues to innovate with advancements in casting technologies, the need for more advanced, wear-resistant, and cost-effective copper mould tubes will rise. Moreover, with the ongoing global push for improved steel production processes, there could be increased investment in enhancing the performance and lifespan of

CMTs, making them even more integral to the market. Overall, copper mould tubes will remain a vital component in optimizing the continuous casting process, contributing to both the quality and productivity of steel manufacturing.
