The global Continuous Emission Monitoring Systems (CEMS) market size is predicted to grow from US\$ 1408 million in 2025 to US\$ 1892 million in 2031; it is expected to grow at a CAGR of 5.1% from 2025 to 2031.

Continuous Emissions Monitoring Systems (CEMS) are sophisticated instruments used to measure and record the levels of various pollutants emitted into the atmosphere from industrial sources such as power plants, factories, and refineries. These systems provide real-time data on emissions, allowing for effective monitoring, compliance, and environmental management. CEMS are essential tools for environmental monitoring and pollution control. By providing real-time data on emissions, they help companies to improve their environmental performance and comply with regulatory requirements.

CEMS solutions are analyzer solutions that have been specifically designed for measuring emissions at Power Generation, Oil & Gas, Chemicals and Fertilizers, Pulp & Paper, Pharmaceutical, Metal and Mining and Others. CEMS solutions can be used to measure pollutants and reference quantities and to perform data processing on the results in accordance with the relevant national or international legislation.

On the basis of product type, Extractive CEMS segment is projected to account for the largest consumption value market share during the forecast period; this segment was estimated to account for 81.73% share in 2023 in terms of consumption volume.

In the applications, Power Generation segment was estimated to account for the highest market share of 27% in 2023. Chemicals and Fertilizers segment held 16% of the

market.
