The global Continuous Filament Winding Machine market size is predicted to grow from US\$ 1591 million in 2025 to US\$ 2367 million in 2031; it is expected to grow at a CAGR of 6.8% from 2025 to 2031.

A continuous filament winding machine (CFW Machine / CW Machine) is a machine for laying filament windings continuously over a cylindrical steel band. The steel band is carried on a forward moving mandrel which is able to collapse and return to the beginning of the travel. The steel band is released after the mandrel collapses and is continuously fed back to the start of the travel where it is again wound on to the mandrel. Continuous Filament Winding (CFW) Machine is designed & manufactured for GRP pipe production. Compared to Dis-continuous Filament Winding (DFW) Machine, it has characteristics of high production efficiency, low cost, labor saving and environmentally friendly.

Chemical is an important driver of this industry. Emerging economies, particularly in Asia and Latin America, are experiencing rapid industrialization, urbanization, and population growth. This drives the demand for bulk chemicals across various sectors, including construction, automotive, electronics, agriculture, and consumer goods. The rising middle class in these regions is also contributing to increased consumption of chemical products.
