The global Continuous Galvanometer Laser Welding Machine market size is predicted to grow from US$ 335 million in 2025 to US$ 648 million in 2032; it is expected to grow at a CAGR of 10.1% from 2026 to 2032.

In 2024, the global production of continuous galvanometer laser welding machines will reach 4166 units, with an average selling price of US$75k per unit.Continuous galvanometer laser welding machines are a type of advanced welding equipment that utilizes a continuous fiber laser as a light source and a high-speed galvanometer scanning system for precise beam oscillation and trajectory control. Unlike pulsed or spot welding galvanometer systems, continuous galvanometer laser welding machines are capable of achieving continuous welds, deep penetration welds, and high-power density, high-speed welding on the workpiece surface. They offer advantages such as high welding efficiency, uniform weld formation, deep penetration, a small heat-affected zone, and the ability to achieve diverse weld trajectories (straight, circular, and wavy). Typical applications are concentrated in welding tabs and modules for power batteries in new energy vehicles, precision structural components for 3C electronic products, optical communication devices, medical devices, precision sheet metal, and high-end equipment manufacturing. They are particularly suitable for applications requiring high welding consistency and automation levels. With the expansion of power battery production capacity and the upgrading of high-end manufacturing, continuous galvanometer laser welding machines are becoming a key alternative to traditional resistance welding and pulse welding, and market demand is growing rapidly.

United States market for Continuous Galvanometer Laser Welding Machine is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
