Heating furnace is a heating device that transfers heat generated by combustion of a fuel to a heated medium to raise its temperature. It is widely used in oil and gas gathering and transportation systems, steel smelting, metal processing and other industries.

The automotive industry plays an essential role in driving heating furnace in emerging economies such as Brazil, India, Indonesia, Mexico, and China. Automotive manufacturers have been propelling the demand for heat treating over the past few years. Increasing presence of major automotive manufactures in the aforementioned countries have contributed to the growth of the heating furnace market. Various parts and components of automobiles undergo heavy stress and thus require high durability. Efficient heat treating can provide strength and improve mechanical performance.

The metallurgy, petrochemical and material handling industries are highly energy intensive, as a result of which, industry participants face several constraints. Use of highly energy-inefficient equipment poses a threat to the environment and impacts operational efficiency. Use of outdated technology and process by small and medium players, primarily in emerging economies across Asia Pacific and Central and South America, is expected to hamper growth in the near future.

This report presents a comprehensive overview, market shares, and growth opportunities of Continuous Heating Furnace market by product type, application, key manufacturers and key regions and countries.
