The global Continuous Laser Welding Machine market size is predicted to grow from US$ 894 million in 2025 to US$ 1590 million in 2032; it is expected to grow at a CAGR of 8.7% from 2026 to 2032.

Continuous laser welding machine is a device that uses continuous wave laser for welding. This welding method achieves efficient and precise welding by continuously emitting stable laser beams to heat and melt the material. Unlike pulsed laser welding, continuous laser welding outputs the laser beam continuously, making it particularly suitable for applications that require high-intensity heat input and deep penetration welding. Continuous laser welding machines are mainly used for deep penetration welding of thick plates. Continuous laser welding can be used for flat docking, overlap, end connection, and corner connection, and the common joint forms are docking and overlap. Although laser welding has a lower welding penetration than electron beam welding, its application prospects are broader because it is not limited by the vacuum chamber of electron beam welding and does not require welding under vacuum conditions.

United States market for Continuous Laser Welding Machine is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Continuous Laser Welding Machine is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Continuous Laser Welding Machine is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
