Continuous magnetron sputtering coating equipment is an advanced coating equipment that deposits target atoms or molecules onto the surface of a continuously moving substrate to form a thin film in a high vacuum environment through the principle of magnetron sputtering. It usually adopts a roll-to-roll or sheet-to-sheet transmission method to achieve a large-area, high-efficiency, and automated continuous coating process. The equipment has the characteristics of good film uniformity, strong adhesion, and can realize multi-layer composite structures.
