Continuous manufacturing lines for pharmaceuticals refer to an advanced method of drug production where the entire process, from raw material input to final product output, occurs in a seamless, nonstop sequence. This approach contrasts with traditional batch manufacturing, which involves producing drugs in discrete, separate steps with intervals for quality checks and transfers between stages.

Regulatory bodies like the FDA and EMA support the adoption of continuous manufacturing due to its potential to improve product quality and manufacturing efficiency. However, implementing continuous manufacturing requires rigorous validation and compliance with regulatory standards to ensure the safety and efficacy of the pharmaceutical products.
