The global Continuous Monitoring System for Flue Gas Emissions market size is predicted to grow from US\$ 3613 million in 2025 to US\$ 4751 million in 2031; it is expected to grow at a CAGR of 4.7% from 2025 to 2031.

A Continuous Monitoring System for Flue Gas Emissions, often referred to as a CEMS (Continuous Emissions Monitoring System), is a specialized environmental monitoring system used to measure and report on the levels of various pollutants and gases emitted from industrial processes, particularly from the exhaust or flue gases of combustion sources. These systems are essential for regulatory compliance, environmental protection, and public health because they help track and control the release of harmful pollutants into the atmosphere.

The implementation of stricter environmental regulations, particularly in regions like the United States, the European Union, and China, is driving the demand for more advanced and accurate CMS solutions. Compliance with emission limits and reporting requirements is a primary driver of CMS adoption.
