## Abstracts

The global Continuous Motion Cartoning Machine market size is predicted to grow from US\$ 844 million in 2025 to US\$ 1211 million in 2032; it is expected to grow at a CAGR of 5.4% from 2026 to 2032.

Continuous Motion Cartoning Machine is an automated secondary packaging system in which cartons and products move continuously through forming, loading, and closing operations without stopping. Unlike intermittent cartoners that pause at each station, this machine maintains synchronized movement while mechanical and servo-driven mechanisms perform carton erection, product insertion, leaflet placement, and flap sealing in motion. The continuous operation enables higher production speeds, smoother product transfer, and reduced mechanical stress, making it suitable for high-volume pharmaceutical, food, and personal care packaging lines where efficiency and throughput stability are critical. The unit price of a Continuous Motion Cartoning Machine is typically tens of thousands of US dollars, with an industry gross profit margin generally between 30% and 40%.

The upstream segment includes servo motors, motion controllers, cam systems, gear assemblies, stainless steel frames, vacuum and pneumatic components, programmable logic controllers, industrial sensors, and control software supplied by automation and component manufacturers. Precision machining and mechanical engineering capabilities are essential due to the synchronization and tolerance requirements of continuous operation. The midstream consists of packaging machinery manufacturers that design, assemble, and customize continuous motion cartoning machines according to product characteristics and industry standards. Downstream, end users include pharmaceutical companies, food producers, personal care manufacturers, and contract packagers who integrate these machines with primary packaging equipment, inspection

systems, case packers, and palletizers to achieve high-speed, fully automated secondary packaging lines.

United States market for Continuous Motion Cartoning Machine is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
