The research report highlights the growth potential of the global Continuous and Discrete Non-metallic Fibers (Basalt Fiber) market. Continuous and Discrete Non-metallic Fibers (Basalt Fiber) are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Continuous and Discrete Non-metallic Fibers (Basalt Fiber). Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Continuous and Discrete Non-metallic Fibers (Basalt Fiber) market.

Basalt Fiber is a material made from extremely fine fibres of basalt, which is composed of the minerals plagioclase, pyroxene, and olivine. It is similar to carbon fibre and fibreglass, having better physic mechanical properties than fibreglass, but being significantly cheaper than carbon fibre. It is used as a fireproof textile in the aerospace and automotive industries and can also be used as a composite to produce products such as camera tripods.

Basalt Fiber is made from a single material, crushed basalt, from a carefully chosen

quarry source and unlike other materials such as glass fibre, essentially no materials are added. The basalt is simply washed and then melted.

Global basalt fiber key players include Kamenny Vek, Zhengzhou Dengdian, Shanxi ECIC etc. Global top 5 manufacturers hold a share about 60%.

North America is the largest market, with a share about 40%, followed by China and Europe with a share both about 28%.
