The global Continuous Opacity Monitoring Systems (COMS) market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

COMS (Continuous Opacity Monitoring Systems) uses light to determine opacity levels. A light shone across a stack bounces off a mirror on the other side and returns to be measured. How much light went out versus how much came back is used to calculate the % opacity value. Using this system a plant can calculate the accurate opacity percentage and make sure all EPA regulations are met (a typical opacity limit is no greater than 20%). Continuous opacity monitors are typically used by facilities which rely on waste materials, oil, coal, wood or other fossil fuels for combustion. Natural gas combustion sources don’t measure opacity as the burning of natural gas does not produce smoke.

United States market for Continuous Opacity Monitoring Systems (COMS) is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
