The global Continuous Radon Monitor market size is predicted to grow from US\$ 113 million in 2025 to US\$ 144 million in 2032; it is expected to grow at a CAGR of 3.5% from 2026 to 2032.

In 2025, the global production of continuous radon gas monitors reached 94,645 units, with an average selling price of US\$1,225 per unit. The global annual production capacity of continuous radon gas monitors is approximately 150,000 units, with a gross profit margin of approximately 26.3%. A continuous radon gas monitor is an instrument used to continuously detect the concentration of radon gas in the environment. Radon (chemical symbol Rn) is a naturally occurring radioactive gas found in soil, rocks, and certain building materials. Prolonged exposure to high concentrations of radon may increase the risk of lung cancer. Therefore, continuous monitoring of radon gas is crucial in mining, construction, environmental monitoring, the nuclear industry, and residential environments. The upstream of the continuous radon gas monitor industry chain includes sensing and detection core components, gas and sample processing systems, etc.; the midstream consists of continuous radon gas monitor manufacturers; and the downstream mainly includes industries such as construction, geology, and environment.

The current market is driven by demand from fields such as nuclear energy, mining, geological disaster prevention, and indoor environmental monitoring. Products are increasingly miniaturized, emphasizing low power consumption, high sensitivity, and long-term stability. Equipment with online real-time monitoring, remote data transmission, and self-diagnostic capabilities is gradually becoming mainstream. With increased awareness of indoor and outdoor radon exposure risks and the improvement of regulations and standards, the market is showing a trend of both segmented

applications and customized solutions. The improved cost-effectiveness of domestic brands, global supply chain collaboration, and the expansion of after-sales service networks are also driving the market competition landscape to a higher level.
