Continuous Ridge Vents are ventilation systems installed along the peak of a sloped roof, allowing for the release of hot, humid air from the attic. These vents are designed to create a continuous opening at the roof ridge, facilitating effective ventilation by promoting natural air circulation. As warm air rises, it escapes through the ridge vent, while cooler air is drawn in through soffit or eave vents. This process helps to regulate attic temperature, reduce moisture buildup, and improve overall energy efficiency in a building.
