The global Continuous Screen Changer for Polymer Extrusion market size is predicted to grow from US$ 378 million in 2025 to US$ 571 million in 2032; it is expected to grow at a CAGR of 6.1% from 2026 to 2032.

Continuous Screen Changers for Polymer Extrusion are filtration devices installed in polymer processing lines to continuously remove contaminants, gels, unmelted particles, and foreign materials from molten polymer streams without interrupting production. They maintain melt quality, reduce pressure fluctuation, improve extrusion stability, and support continuous operation in plastics, films, fibers, pipes, profiles, compounding, recycling, and specialty polymer processing. Typical systems include filter elements, breaker plates, hydraulic drive units, screen-cleaning mechanisms, pressure sensors, heating systems, control modules, melt passages, seals, and temperature-control components. This category excludes simple manual screen changers, standalone filter meshes, complete extruders, pelletizing systems, and general polymer processing equipment.The industrial chain of Continuous Screen Changers for Polymer Extrusion includes upstream suppliers of alloy steel, tool steel, filter screens, breaker plates, hydraulic cylinders, motors, valves, heaters, pressure sensors, temperature sensors, sealing materials, control systems, electrical components, precision machining services, heat-treatment services, surface coatings, testing equipment, and packaging materials. The midstream consists of polymer processing equipment manufacturers that design and assemble filtration chambers, automatic screen-cleaning mechanisms, hydraulic systems, heating structures, melt channels, pressure-control systems, monitoring modules, and customized solutions for different polymers and extrusion conditions. Downstream users include plastic film producers, pipe manufacturers, fiber producers, recycling companies, polymer compounders, packaging material suppliers, automotive plastic processors, chemical

material companies, and extrusion processing plants.

The Continuous Screen Changer for Polymer Extrusion market is supported by demand for higher extrusion stability, cleaner polymer processing, recycling quality improvement, and reduced production interruptions. The industry is moving from basic filtration solutions toward automated systems that provide stable melt pressure, lower material waste, easier maintenance, and better process control. Demand is stronger in high-value polymer applications such as films, fibers, engineering plastics, and recycled materials where contamination directly affects product performance. Buyers increasingly evaluate filtration efficiency, pressure consistency, material compatibility, cleaning reliability, energy use, and integration with extrusion control systems. Standard filtration products face price pressure, while advanced continuous systems with automation and application engineering maintain stronger value. Main challenges include complex polymer behavior, high-temperature operation, maintenance requirements, contamination variability, and the need for precise matching between filtration equipment and extrusion processes.In 2025, global Continuous Screen Changer production reached approximately 4.20 thousand units, with an average global market price of around US$92,000 per unit. The gross profit margin of major companies in the industry ranged from 30% to 48%. In 2025, the global production capacity of Continuous Screen Changers for Polymer Extrusion was approximately 5.60 thousand units.
