## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Continuous testing platforms offer the combined capabilities of software testing tools, test automation software, and test management software to handle the complete testing process for new software and features. These solutions allow users to assess whether a software is usable, performs properly, meets development team goals, and meets overall requirements via predefined or user-defined tests. They also allow users to automate these tests, controlling their execution using the minimum set of scripts. Users can then maintain test cases and test results in a repository-like structure, which are then turned into actionable reports.
