The global Continuum Robots market size is predicted to grow from US\$ 597 million in 2025 to US\$ 1708 million in 2032; it is expected to grow at a CAGR of 16.3% from 2026 to 2032.

In 2025, global Continuum Robot output reached about 40,000 units and global capacity of around 50,000 units. The average price is about USD 15,000 per unit, with gross margins near 42%. Continuum Robots are robotic systems characterized by continuously flexible backbones or structures that can bend, twist, and extend smoothly along their length, unlike conventional rigid-link robots with discrete joints. Inspired by biological structures such as octopus arms, elephant trunks, snake bodies, and tentacles, continuum robots provide high dexterity, compliance, and the ability to navigate through confined or complex environments. They are widely used in minimally invasive surgery, industrial inspection, aerospace maintenance, search-and-rescue operations, and advanced research applications. The supply chain begins with upstream suppliers of advanced materials (silicone elastomers, polymers, superelastic alloys such as Nitinol, composite materials), precision cables and tendons, pneumatic or hydraulic components, sensors (fiber-optic, force, position, and vision sensors), microelectronics, and actuators. Midstream activities involve robot design, continuum mechanism fabrication, control system development, software integration, and assembly by specialized robotics manufacturers and research-driven companies. Downstream includes system integrators, medical device manufacturers, industrial automation providers, aerospace and defense contractors, research institutions, and healthcare organizations that deploy continuum robots for specialized applications requiring safe human interaction and maneuverability in constrained spaces.

United States market for Continuum Robots is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Continuum Robots is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
