The global Converter and Inverter Connections market size is predicted to grow from US$ 538 million in 2025 to US$ 761 million in 2032; it is expected to grow at a CAGR of 5.2% from 2026 to 2032.

Insulated gate bipolar transistors (IGBTs) offer high input impedance, making them popular in DC and AC motor drives, UPS systems, power supplies and renewable energy (PV and wind). They have lower gate drive requirements and lower switching losses, making them more efficient at smaller sizes and lower costs. IGBT connections are often the first choice for high current and high voltage applications. IGBT manufacturers must balance tradeoffs between switching speed, conduction loss, and ruggedness so the devices provide higher frequency and higher efficiency.

Power MOSFETs are extremely fast and the high switching speed yields low switching loss. They require very little gate drive power because of the insulated gate. In these respects, power MOSFET connections are often seen as the ideal switch. They can be found in most power supplies, DC-DC converters, and low voltage motor controllers. Super junction MOSFETs are increasingly being used in to increase the efficiency and reduce the size of power supplies.

United States market for Converter and Inverter Connections is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Converter and Inverter Connections is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
